

Sprint 1 Planning Document

Team: P03-02

Date: 25/08/2024

Attended: all members.

Product Owner: Dale Stanbrough.

Development Team:

- Christian Nieves
- Seanghai Heng
- Keenan Phillips
- William Dash
- Heethasha Sandeep Kumar
- Paul Johny Mampilly

Sprint Goal

- Complete the implementation and testing of base features, such as account creation and booking appointments.

Duration of Sprint: 3 weeks, starting 26th August 2024, ending 22nd September 2024.

User Stories and Product Backlog Items:

- [Create Base HTML Template for Application](#)
- [User Registration](#)
- [Booking Appointments](#)
- [Cancel Appointments](#)
- [Updating Personal Details](#)
- [Appointment History](#)
- [Set Up Database for VetCare](#)
- [Viewing Pet's Medical Information](#) [if have time]

- [Viewing Dosage Instructions for Pet's Medication](#) [if have time]
- [Update Pet Medical Data](#) [if have time]

Vision for Sprint

- Chosen product backlog items are essential for the application's functionality. Implementing these will ensure that we have a shippable product that meets basic functional requirements (registration, booking an appointment, cancelling an appointment).

Estimation in Story Points

- [Create Base HTML Template for Application](#) – 5 points
- [User Registration](#) – 8 points
- [Booking Appointments](#) – 8 points
- [Cancel Appointments](#) – 3 points
- [Updating Personal Details](#) – 5 points
- [Appointment History](#) – 5 points
- [Set Up Database for VetCare](#) – 5 points
- We believe that User Registration and Booking appointments will take the longest to complete, due to figuring out the initial difficulties of starting from scratch and dealing with a brand-new database API. The following tasks with a low story point estimate should take less time, due to them being minor additions to the major features.

Stand-ups

- **Date and Time:** Every Wednesday and Saturday, 8 pm; in-class Fridays, 2:30 pm
- **Location:** Microsoft Teams
